

Environmental Policy

Kane International is committed to protecting the environment and will ensure compliance with all relevant environmental legislation and associated regulations as a minimum.

Kane has maintained its ISO 14001 accreditation for almost ten years and is continually looking for new opportunities to improve the company's environmental performance and achieve best practice.

Senior Management are fully committed to providing the leadership and resources necessary to deliver on these aims and will represent environmental matters at the highest level of the business.

It is recognised that improving environmental performance is not only morally and socially responsible, but will bring economic savings to both the company and the customer.

To reduce our impact on the environment, Kane International will take all reasonable measures to;

- Minimise the energy and water use within our buildings
- Reduce the amount of waste we produce as a result of our operations
- Increase the re-use and recycling of waste by managing our waste proactively.
- Use recyclable and renewable materials in place of virgin products wherever practicable.
- Promote environmental awareness among our employees and encourage them to work in an environmentally responsible manner.
- Take a lifecycle approach when assessing the impact of our products, services and operations on the environment.

This policy will be reviewed annually - or when procedural, legislative or best practice changes occur - to ensure it remains relevant to the nature and scale of the business.

For and on behalf of Kane International Ltd
